SUMMARY

B.Tech Computer Science student who builds full-stack applications with AI at the core — document processing pipelines, machine learning models, and the FastAPI, React, and Node.js systems that serve them. Comfortable across the stack, from PDF parsing and REST API design to model training and deployment.

PROJECTS

PaperPilot / *AI-Powered Scientific Literature Review Assistant* | Live Link | GitHub Repo

Tech: Python, FastAPI, PyMuPDF, SQLite, React, TypeScript, REST APIs

- Built a research assistant that ingests scientific PDFs and turns them into structured, searchable documents — multi-file upload, text extraction, cleaning, and section detection — served by a FastAPI backend and a React frontend.
- Implemented the PDF ingestion pipeline with PyMuPDF: page-level text and typography extraction, dehyphenation across line breaks, Unicode ligature normalization, running header and footer pruning, and paragraph reconstruction.
- Wrote a heuristic classifier that detects canonical paper sections — abstract, methodology, results, discussion, limitations, conclusion, references — and persists both raw and cleaned text to SQLite with cascade-linked section records.
- Designed the React 19 and TypeScript workspace: paper library with full-text search, side-by-side methodology comparison, research-gap visualization, and a command palette. Currently extending it with sentence embeddings, FAISS retrieval, and RAG-based review generation.

HireSensei AI / *AI-Powered Recruitment & Placement Platform* | Live Link | GitHub Repo

Tech: React.js, TypeScript, Node.js, Express.js, MongoDB, REST APIs, JWT, LLM APIs, RAG

- Built a recruitment platform connecting students, recruiters, companies, and colleges, using React.js, TypeScript, Node.js, Express.js, and MongoDB.
- Secured it with JWT authentication and role-based access across four user roles, plus bcrypt password hashing and Zod validation on protected REST APIs.
- Building the AI layer: LLM-based resume analysis, RAG retrieval over placement and job data, and candidate-job matching.

Farm2Market / *AI-Enabled Agri-Commerce Platform* | Live Link | GitHub Repo

Tech: Python, TensorFlow, OpenCV, Deep Learning, Computer Vision

- Trained a deep learning image classifier that grades fruit quality and freshness from photos, with an OpenCV pipeline for resizing, normalization, and cleanup.
- Built a price-prediction model to support fair crop pricing, and integrated both models into a live marketplace serving real users.

TECHNICAL SKILLS

AI & Machine Learning: Machine Learning, Deep Learning, CNNs, RAG, NLP
Libraries: scikit-learn, TensorFlow, OpenCV, NumPy, Pandas, PyMuPDF
Web & Backend: FastAPI, React.js, TypeScript, Node.js, Express.js, REST API
Languages: Python, JavaScript, TypeScript, C++,
Databases: PostgreSQL, MySQL, MongoDB, SQLite
Core CS & Tools: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks, Git, GitHub, Linux, Docker, Postman

ACHIEVEMENTS AND CERTIFICATION

- Solved 200+ Data Structures & Algorithms problems.
- Getting Started with Artificial Intelligence — IBM SkillsBuild.

EDUCATION

B.Tech in Computer Science Engineering | Kolhapur Institute of Technology | CGPA: 7.6 / 10.0 — 2023 – 2027
12th Grade | SRM Welkin Higher Secondary School, Sopore — 83%
10th Grade | SRM Welkin Higher Secondary School, Sopore — 98%

LANGUAGES

English (Professional) • Urdu/Hindi (Native/Bilingual) • Kashmiri (Native)
